

Project Scope

Carl Manngård, Teodor Linder, Adam Ingemarsson, Johan Davidsson,
Linus van Ginhoven, Edward Karlsson, Patrik Emanuelsson

March 2020

Description

We work towards a Production Company called Made by Waves (<https://www.bywaves.se/>). What they as a company ask for is a productivity tool which consists of a few different base functionalities. Today they use three different tools to plan projects and track goals. Therefore, getting an overview of tasks, coming projects and future goals is expressed as rather time consuming. We aim to develop one tool that merges the most important, value creating, functions from the previous tools into one. This results in software containing the following components:

Weekly structure

- Showing weekdays with the tasks for that specific day
- Move between weeks
- Mark tasks as completed or high priority

Timeline

- Showing ongoing projects and their timelines
- Primarily giving an overview Goals
- Showing goals for 3 months, 6 months as well as 12 months and connected metrics
- Goals divided into a few categories

MVP

- Contain a view over a whole week where you can add and organise daily tasks.
- Contain a timeline view where you can see longer stretching projects.

Business model canvas

Our business model canvas can be seen in figure 1 or in separate file in the project repository.
